## DIRECTIONS FOR USING.

For wheat, if sown broadcast, use 300 to 350 lbs. to the acre. If drilled in with the seed, from 200 to 250 will be sufficient.

On all other grain, apply from 300 to 350 lbs. to the acre.

For grass, use 350 to 400 lbs. to the acre; apply broadcast before a rain.

For vines and fruit trees of every kind, loosen the earth about the vine or tree and use at the rate of 500 lbs. to the acre, working it into the soil.

On potatoes, mix the fertilizer with the earth where the seed is dropped. Use at the rate of 400 lbs. to the acre.

For corn or vegetables, use from 300 to 400 lbs. to the acre.

For hops, use from 400 to 500 lbs. to the acre.

For lawns, apply broadcast, using 10 lbs. for plot 15x20 feet, or 300 square feet.

A light top dressing of these fertilizers applied at any time will be found to aid the growth of crops very materially.

## ORGANIC AND CHEMICAL Fertilizer

Food for Plants.

25 Cents per Box.

Our Organic Plant Fertilizer makes plants grow and bloom luxuriantly, and drives INSECTS FROM THE SOIL. This excellent fertilizer is the only one of the sort which can be used with good results to pot plants. It is used by dissolving a teaspoonful in a pint of water and applying to the soil of pot plants every week or two. It has no disagreeable odor, and is the only artificial fertilizer which can be used without danger of injury to the plant. It starts the plants at once into a healthy and vigorous growth and abundant bloom. It drives worms and other troublesome insects from the soil. It takes the place of liquid manure, and is just the thing that has been wanted for a long time. Especially fine for ferns and house plants and window gardening in general.

P.—PANSY (*Heart's Ease*).

Boys and girls at a small cost can grow just as fine flowers as professional florists, or the man with millions. In order to have a constant supply of flowers, the seed should be sown twice a year, and transplanted

to the beds where the plants are to bloom. Have a seed bed of a light porous soil, covering the seed about twice its thickness and then firming the soil hard with a board. The seed should be freely watered every day, and the ground not permitted to become dry or baked—evils to be guarded against when in July and August the second sowing is made; then the seed bed should be covered during the day until the seed commences to sprout through the ground.

Young plants pro-

duce the largest and best flowers. Plenty of well-rotted cow manure and our Organic and Chemical Fertilizer spaded into the bed will well repay you for your labor. Half the battle in growing Pansies is in having a well-prepared seed bed. It is only in this way that the delicate markings to be found in the improved show varieties are obtained. The finest exhibition flowers are grown where the plants have sunshine from morning till night. To keep them continuously blooming the faded blossoms should be picked off before forming seed. And if the blossoms are wanted for exhibition, only one flower at a time to each plant should be allowed to expand.

## HOW TO MAKE A HANDSOME LAWN.

### What Is Most Necessary Is to Have Good Seed and the Ground Thoroughly Worked.

The ground should be thoroughly cleansed of all root weeds before sowing. It should be dug to an equal depth, and trodden, rolled and leveled until a firm, uniform surface is obtained. The selection of proper grass seeds is the important matter, and this requires more than ordinary attention, so that the kinds of grass be suited both to the purpose and soil. It must be remembered that much of the fine appearance of a lawn depends upon regularity in mowing.

For forming new lawns fifty or sixty pounds of seed are required per acre, and for renovation of old lawns half that quantity will give good results.

### LAWN FERTILIZER.

Unless thoroughly decomposed, stable manure is not desirable, because of the number of weed seeds contained in it. Our Bone Meal Fertilizer possesses the requisite properties to induce a rapid, luxuriant growth, and should be sown broadcast at the rate of 400 pounds per acre.
